## Synthetic Risk Reward Indicator

The risk category was calculated using historical volatility data, based upon the methods set by European Union rules. The calculation of the risk and reward profile is based on historical data that cannot be used as a reliable indicator for the future risk profile of this fund. Volatility is influenced by changes in the stock market prices, currencies and interest rates which can be affected unpredictably by diverse factors including political and economic events. This risk indicator is subject to changes; the classification of the fund may change over time and cannot be guaranteed. The lowest category of risk does not mean that the investment is risk-free.

On the basis of price fluctuations measured in the past, the fund has been classified in the category 6. The Fund has been classified in the category 6 as it invests in equities and is in a higher category as the values of those investments have experienced higher rate of change in the past.
